WEB DEVELOPMENT ACTIVITY REPORT

Three Responsive Website Projects Using HTML5 & CSS

Activities included

1. Movie Review and Rating Website
2. Gaming and Esports Community Website
3. Restaurant and Cafe Website

Prepared as a consolidated academic project report. Includes project objectives, key features, webpage preview images, and complete HTML/CSS source files.

Note: The images in this report are designed webpage preview screenshots representing the layouts. Open the included HTML files in a browser to view and interact with the actual webpages.

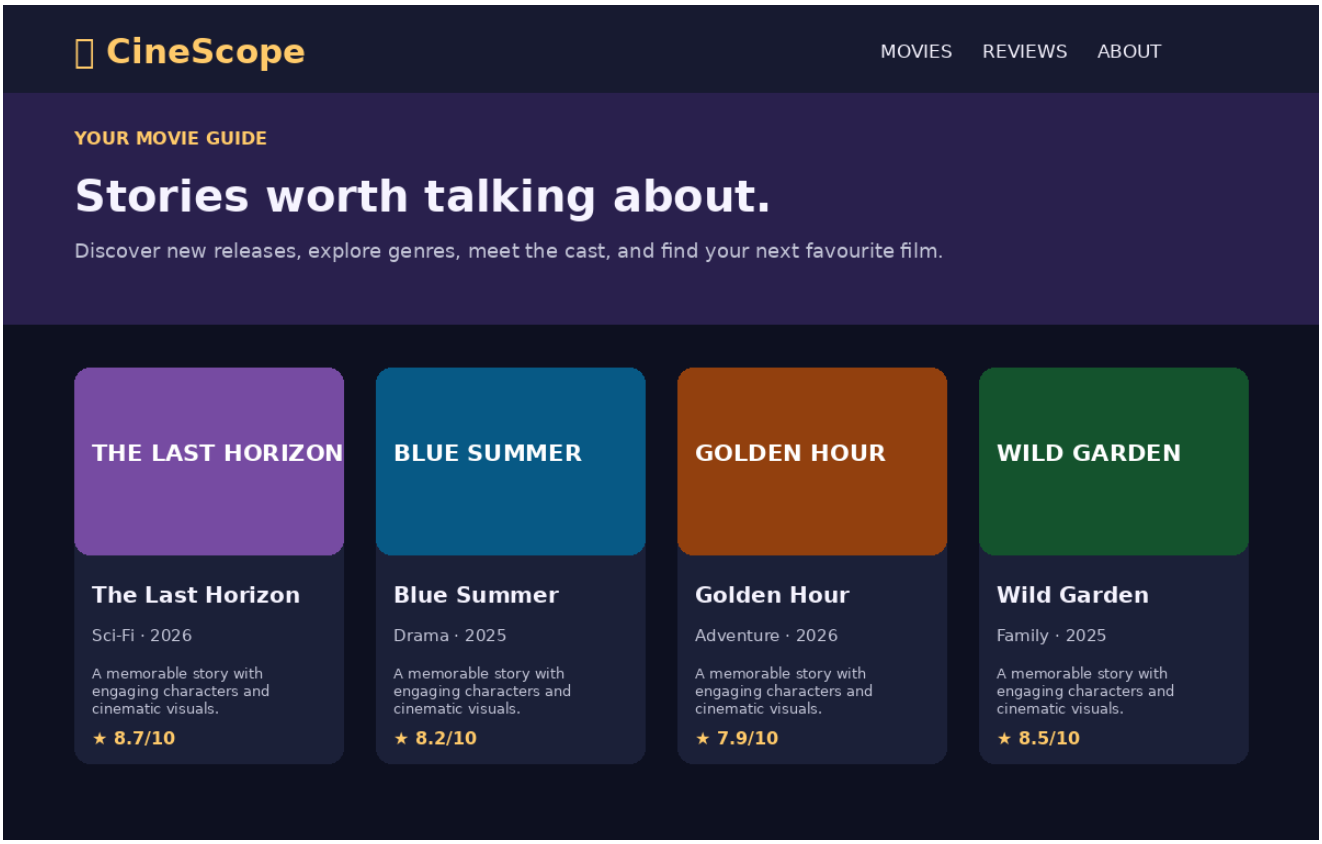

Web Activity 1 — Movie Review and Rating Website

Objective: To create a movie discovery website that presents film posters, genres, release dates, cast details, story summaries, critic reviews, and rating displays.

Main features

• Dark cinematic theme with contrasting accent colour
• Responsive movie-card grid and poster-style panels
• Genre, release year, synopsis, cast, and rating information
• Critics' Corner section with review snippets
• Responsive navigation and hover effects

Web Activity 2 — Gaming and Esports Community Website

Objective: To build a gaming portal where visitors can explore game profiles, esports tournaments, teams, player rankings, and gaming news.

Main features

• Dark esports-inspired interface with neon accent colour
• Game profile cards and tournament schedule cards
• Structured leaderboard table with rank, player, team, and points
• Team spotlight and latest-news sections
• Responsive grid, table styling, and card borders

Webpage preview

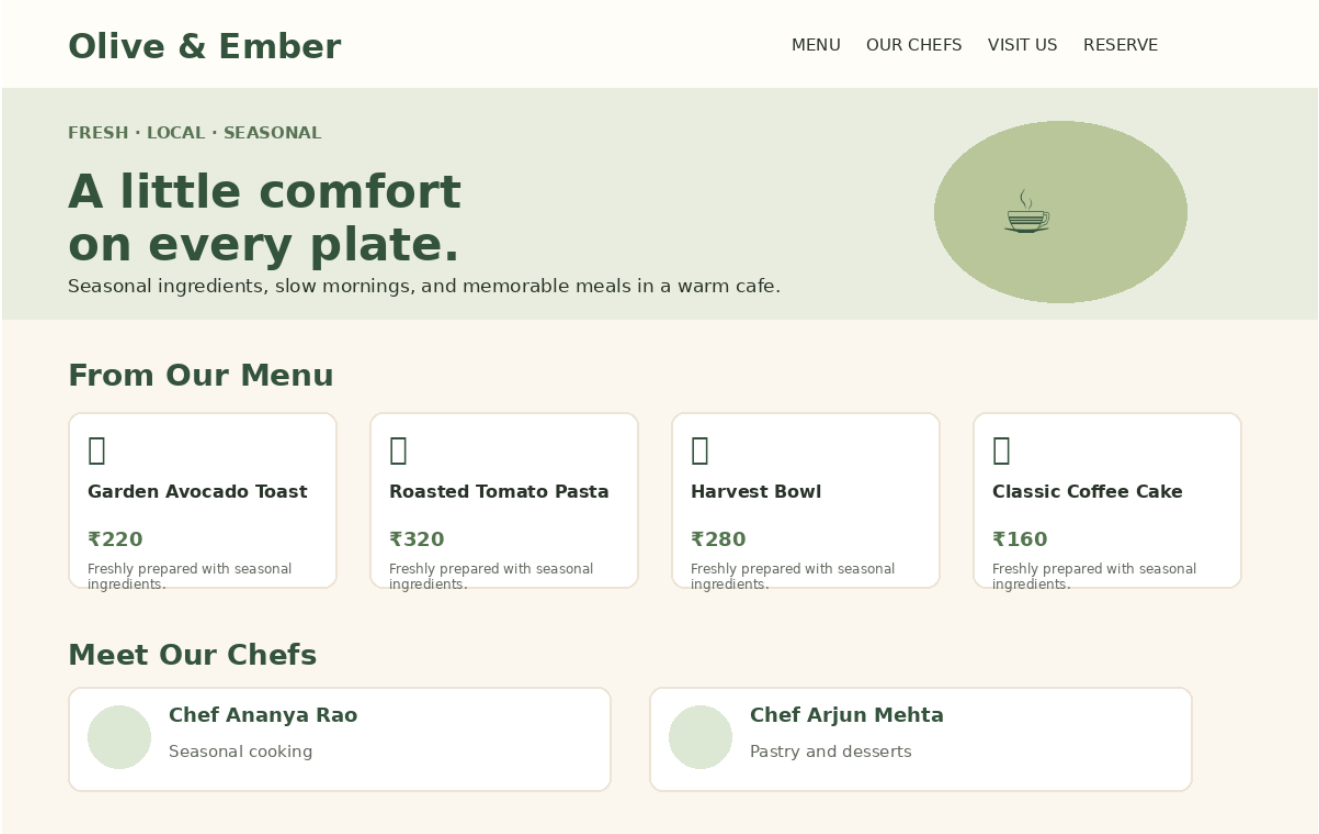

Web Activity 3 — Restaurant and Cafe Website

Objective: To design a cafe website that showcases food menus, chef profiles, ambience, customer testimonials, opening hours, location details, and a reservation form.

Main features

• Warm colour palette and elegant typography
• Menu cards with sample dishes and prices
• Chef profile cards and customer testimonials
• Opening hours, address, and contact information
• Reservation form with name, email, date, guest count, and requests

Testing and usage

Save all HTML files and open them in a modern browser such as Chrome or Edge. Resize the browser window to check responsive layouts. Movie ratings, esports standings, restaurant details, and reservation behaviour are sample content for a student demonstration. The restaurant form displays a demo confirmation only; it does not submit a real booking.

Conclusion

These three activities demonstrate semantic HTML5 elements, CSS layouts, responsive grids, typography, colour themes, hover effects, tables, and form controls. Each webpage is provided as a separate HTML file so it can be opened, edited, and presented independently.
